Clinical Policy Title:	dalfampridine
Policy Number:	RxA.336
Drug(s) Applied:	Ampyra®
Original Policy Date:	03/06/2020
Last Review Date:	09/14/2020
Line of Business Policy Applies to:	All lines of business

Background

Dalfampridine (Ampyra®) is a potassium channel blocker. Dalfampridine is indicated to improve walking in patients with multiple sclerosis (MS). This was demonstrated by an increase in walking speed.

Dosing Information

Drug Name	Indication	Dosing Regimen	Maximum Dose
Dalfampridine (Ampyra®)	Multiple Sclerosis	10 mg twice daily (approximately 12 hours apart)	20 mg/day

Dosage Forms

- Extended-release tablets: 10 mg

Clinical Policy

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

I. Initial Approval Criteria

A. Multiple Sclerosis (must meet all)**:**

1. Diagnosis of MS;
2. Prescribed by or in consultation with a neurologist;
3. Age 18 years of age or older;
4. Member has sustained walking impairment but is able to walk with or without assistance;
5. Dose does not exceed 20 mg (2 tablets) per day.

Approval duration
Commercial: 6 months
Medicaid: 6 months
HIM: 6 months

II. Continued Therapy Approval

A. Multiple Sclerosis (must meet all)**:**

1. Member is currently receiving dalfampridine that has been authorized by RxAdvance or the member has met initial approval criteria listed in this policy;
2. Member is responding positively to therapy;

3. If request is for a dose increase, new dose does not exceed 20 mg (2 tablets) per day.

Approval duration
Commercial: 12 months
Medicaid: 12 months
HIM: 12 months

III. Appendices

APPENDIX A: Abbreviation/Acronym Key
CrCl: Creatinine clearance
FDA: Food and Drug Administration
MS: Multiple sclerosis

APPENDIX B: Therapeutic Alternatives
None

APPENDIX C: Contraindications/Boxed Warnings
- Contraindication(s):
  - History of seizure; moderate or severe renal impairment (CrCl ≤ 50mL/min); history of hypersensitivity to Ampyra or 4-aminopyridine
- Boxed warning(s):
  - None

Appendix D: General Information
- Use of doses above 10 mg twice daily may increase the risk of seizures.
- Patients with mild renal impairment (CrCl 51-80 mL/min) may exhibit Ampyra levels that approach those attained at higher doses and that have been associated with a higher risk of seizures. Ampyra should be used with caution in this patient population, and CrCl should be estimated or known prior to initiating Ampyra therapy.
- CrCl can be estimated using the Cockcroft-Gault formula: CrCl = [(140-age) x (weight in kg) x (0.85 if female)] / (72 x Cr).
