

Clinical Policy Title:	nintedanib
Policy Number:	RxA.440
Drug(s) Applied:	Ofev®
Original Policy Date:	03/06/2020
Last Review Date:	09/14/2021
Line of Business Policy Applies to:	All lines of business

Background

Nintedanib (Ofev®) is a kinase inhibitor.

Ofev® is indicated for:

- Treatment of idiopathic pulmonary fibrosis (IPF).
- Treatment of chronic fibrosing interstitial lung diseases (ILDs) with a progressive phenotype.
- Slowing the rate of decline in pulmonary function in patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD).

Dosing Information

Drug Name	Indication	Dosing Regimen	Maximum Dose
nintedanib (Ofev®)	IPF, ILDs, SSc-ILD	150 mg orally twice daily approximately 12 hours apart Not recommended in patients with moderate (Child Pugh B) or severe (Child Pugh C) hepatic impairment Recommended dosage in patients with mild hepatic impairment (Child Pugh A): 100 mg twice daily approximately 12 hours apart taken with food	300 mg/day

Dosage Forms

- Capsules: 100 mg, 150 mg

Clinical Policy

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria. The provision of provider samples does not guarantee coverage under the terms of the pharmacy benefit administered by RxAdvance. All criteria for initial approval must be met in order to obtain coverage.

This clinical policy has been developed to authorize, modify, or determine coverage for individuals with similar conditions. Specific care and treatment may vary depending on individual need and benefits covered by the plan. This policy is not intended to dictate to providers how to practice medicine, nor does it constitute a contract or guarantee regarding payment or results. This document may contain prescription brand name drugs that are trademarks of pharmaceutical manufacturers that are not affiliated with RxAdvance.

I. Initial Approval Criteria

A. Idiopathic Pulmonary Fibrosis (must meet all):

1. Diagnosis of IPF;
2. Prescribed by or in consultation with a pulmonologist;
3. Age \geq 18 years;
4. Attestation that liver function tests in all patients and pregnancy tests in females of reproductive potential are conducted prior to initiating treatment;
5. Member meets at least one of the following (a and b):
 - a. Pulmonary fibrosis on high resolution computed tomography (HRCT);
 - b. Known causes of pulmonary fibrosis have been ruled out (see Appendix D).
6. Dose does not exceed 300 mg per day.

Approval Duration

Commercial: 6 months

Medicaid: 6 months

B. Systemic Sclerosis Associated Interstitial Lung Disease (must meet all):

1. Diagnosis of SSc-ILD;
2. Prescribed by or in consultation with a pulmonologist
3. Age \geq 18 years;
4. Attestation that liver function tests in all patients and pregnancy tests in females of reproductive potential are conducted prior to initiating treatment;
5. Member meets at least one of the following (a and b):
 - a. Pulmonary fibrosis on HRCT;
 - b. Additional signs of SSC are identified.
6. Dose does not exceed 300 mg per day.

Approval Duration

Commercial: 6 months

Medicaid: 6 months

C. Chronic Fibrosing Interstitial Lung Disease (must meet all):

1. Diagnosis of chronic fibrosing interstitial lung diseases with a progressive phenotype;
2. Prescribed by or in consultation with a pulmonologist;
3. Age \geq 18 years;
4. Attestation that liver function tests in all patients and pregnancy tests in females of reproductive potential are conducted prior to initiating treatment;
5. Member is a non-smoker or has been abstinent for at least 6 weeks;
6. Documented pulmonary function test within the past 60 days reflecting Forced vital Capacity (FVC) \geq 45% of predicted;
7. Dose does not exceed 300 mg per day.

Approval Duration

Commercial: 6 months

Medicaid: 6 months

II. Continued Therapy Approval

A. All Indications in Section I (must meet all):

1. Member is currently receiving medication that has been authorized by RxAdvance or the member has met initial approval criteria listed in this policy;
2. Member is responding positively to therapy;

3. If request is for a dose increase, new dose does not exceed 300 mg per day.

Approval Duration

Commercial: 12 months

Medicaid: 12 months

III. Appendices

APPENDIX A: Abbreviation/Acronym Key

FDA: Food and Drug Administration

IPF: idiopathic pulmonary fibrosis

NCCN: National Comprehensive Cancer Network

NSCLC: non-small cell lung cancer

HRCT: high resolution computed tomography

APPENDIX B: Therapeutic Alternatives

Not applicable.

APPENDIX C: Contraindications/Boxed Warnings

- Contraindication(s):
 - None reported.
- Boxed Warning(s):
 - None reported.

APPENDIX D: General Information

- Existing data for the use of Ofev® for non-small cell lung cancer (NSCLC) as a second-line agent show statistically significant improvement in progression free survival, but the clinical significance of the improvement (0.7 months) is questionable. Additionally, there is no significant difference in overall survival in patients treated with Ofev®. The National Comprehensive Cancer Network (NCCN) guidelines do not currently mention Ofev® as a treatment alternative for NSCLC.
- The following are potential risks in taking this medication: elevated liver enzymes and drug-induced liver injury, gastrointestinal disorders, embryo-fetal toxicity, arterial thromboembolic events, bleeding and gastrointestinal perforation.
